Institut Teknologi Sepuluh Nopember

[E03] NestJS CRUD

Setup

1. Install Nest CLI globally: `pnpm add -g @nestjs/cli`
2. Create new NestJS project: `nest new .` in the project's directory.
3. Install dependencies: `pnpm install`
4. Install additional dependencies: `pnpm add class-validator class-transformer`
5. Install testing dependencies: `pnpm add -D @nestjs/testing supertest`

Do

1. Generate users resource: `nest generate resource users` (choose REST API and CRUD entry points)
2. Implement the users service in the generated files under `src/users/` directory
3. Update `src/main.ts` to configure the application properly
4. Run `pnpm start:dev` to run the development server
5. Run `pnpm test:e2e` and make sure it passes all the tests
6. Write the documentation on how you did it in `docs/main.typ` file:
    1. The steps taken to implement in NestJS.
    2. The comparison with the pure NodeJS implementation.
        1. Better or Worse? and
        2. Why?

[E03] NestJS CRUD

Yang perlu dikerjakan

- `src/**`: Implementasi CRUD
- `docs/main.typ`: Dokumentasi penjelasan pengerjaan tugas ini
- `profile.txt` dengan format:

```
{NRP}
{Nama}
```
